

CONFIDENTIAL

Dee-Thomas of the Murphy Family

Curriculum Vitae

Dee Thomas arrived alive on December 15th, 1948 on Seminole, Texas, to a Christian family. He became born-again in 1953 when he surrendered his life to God's service. Since then and now at three score and five, God has prepared him to do just that.

Going to middle and high school, Tom did many jobs. He delivered newspapers, worked at Kinney's Shoes, washed dishes at restaurants and ran service stations. He graduated from high school at Hobbs New Mexico in 1967. After graduation, he worked at potash mines, an oil refinery, went to Alaska and worked on the off-shore platform rigs for a season, worked for the International Brotherhood of Electrical Workers Union installing long distance dialing cables. He got married in 1971, moved back to Alaska and received managerial training with Kinney Shoe Corporation and started managing his own store in Kenai Alaska, breaking many company and store records in sales. Being successful in retail was very challenging and enjoyable as Tom always loved to find out what his customers wanted and just give them what they desired. However, he was soon solicited by one of his customers to go to work for Atlantic Richfield Corporation (ARCO) in their production operation working every other week making twice the money he did as a retail store manager, and getting two week a month off. Tom took the opportunity.

Working for ARCO one week out and one week in, Tom found that he had a lot of time on his hands. He considered the car wash business, picked out a location and designed a plan for the carwash and presented it to the city council. This is where he got his first introduction to political corruption when his plan was stolen by one of the city council members who gave it to his friend, the mortician, who built the carwash Tom had designed, on the piece of property he had requested from the county to lease, a month later.

Looking for something else to do on his week off, a friend suggested he put his money into building some outhouses and rent them out to the oil companies for their on-shore rigs and parks in Alaska. He could service them on his weeks in from the platform. In the summer of 1972 he did. Congress, in 1972, also had adopted the Federal Water Pollution Control Act Amendment of 1972, aka "Clean Water Act." This was expected to create a whole new industry to contain and control waste discharges on all private property prior to the raw sewage leaving its source. It wasn't long and Tom had to make a decision whether to stay with ARCO, become a "company man," or venture out and expand his business renting outhouses that had become much more profitable than his ARCO position.

He decided to go full time in his private business and buy a pumping truck and start also pumping cesspools and residential septic systems as the city mayor was advertising on the radio for someone to provide this service.

In short term, Tom had a fleet of trucks providing on-site wastewater management services to over 80% of South Central Alaska. Tom had a very large “rent-a-can” business, an oilfield pumping business with contracts with Union, Standard and ARCO among others. To meet a need, Tom also designed, owned and operated Alaska’s first private septage waste disposal facility for his needs, and for his competitors’ needs.

In 1975, Tom started his own construction company specializing in design and repair of new and failing private onsite/septic systems. Tom became a Certified Installer, certified by the State of Alaska as qualified on the same level as Civil Engineers to design residential and light commercial on-site wastewater disposal systems. The majority of all on-site system repairs in south central Alaska were done by his company, Town & Country Pumping, as he virtually had the market cornered by developing an Automatic Service Program for his customers to prevent them from ever being bothered with backup problems again. His reputation grew and he dominated his market with over an 80% market share. Tom has been specializing in doing turn-key any onsite wastewater treatment projects from the conception up to completion ever since.

When the Alaska oil boom crashed in Alaska, Tom had to decide whether he wanted to stay in business with an extremely reduced revenue stream, or pursue his dream in the direction of technology. He chose technology and to follow his dream for clean water.

So in 1987 Tom moved to Maui, Hawaii, and by 1988 had installed the first prototype of his biological process technology of what is now referred to internationally in the Wastewater Industry as the AES Technology or Intermittent Decant Extended Aeration (IDEA) process.

By 1989, he had developed the first revolution in biological process technology since 1903. He went on to contract with a private patent specialist to learn how to write his own patents as he figured that would be easier than trying to teach an attorney how his technology worked. He wrote and was issued 9 U.S. Patents and over 40 International Patents between 1991 and 1997 and has more on the drawing board now.

In 1990, Tom’s wife Jeannie established Advanced Environmental Systems, Inc. and by the year 2000, the ten year established corporation had completed turn-key of over 100 projects world wide up to 1.5 million gallons per day in size for clients such as McDonalds, Wal-Mart, Kentucky Fried Chicken, Price-Costco, and many others, up to the largest engineering and construction company in the world, Fluor Daniel Corporation in conjunction with Newmonte Gold Corporation. By 2000, Tom had completed over 1,000 turn-key designs for his wastewater purification technology, scalable from a single home device up to 25 million gallons per day municipal facility and completed over 100 turn-key installations globally, approximately half in America and the other half were installed in several other countries. More can be seen at www.reclamator.com.

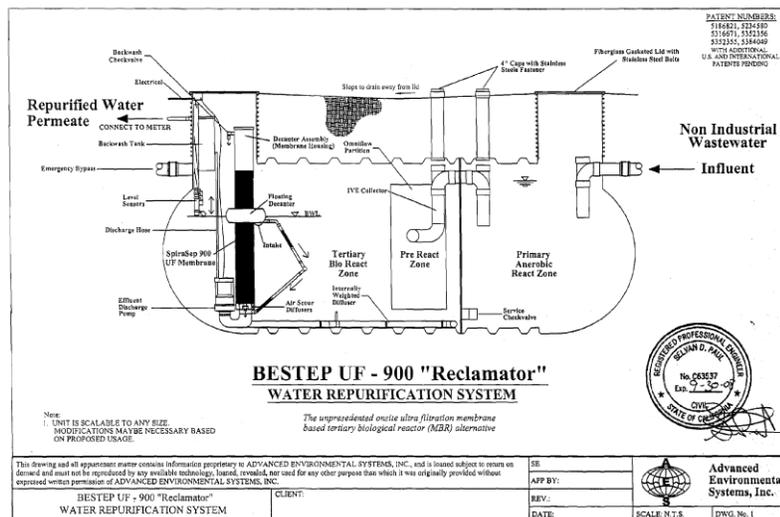

In 1994, Tom contracted to have his technology undergo a strict protocol of a six month Technology Evaluation by NSF International, the world’s largest third party testing laboratory located in Ann Arbor, Michigan, to prove the IDEA process. The finished

Technology Evaluation Report demonstrated his technology to produce non-pollutant water, eliminate 100% of toxic nitrate discharges and recover alkalinity to 7.5 -8.0 pH.

The reason Tom spent over \$150,000 to receive the NSF Certification is because the Federal Water Pollution Control Act mandated that, with every permit issued since July 1, 1973, the best available demonstrated control technology (“BADCT”) was to be specified by “brand name or equal” and installed at “every building having a toilet” in it as mandated by the Federal Water Pollution Control Act. He had developed the BADCT and left Maui and relocated to Reno, Nevada in 1997 so as to better serve the American market for more efficient distribution of the US Congressionally mandated “pollutant control technology” to all of his reps and authorized agents globally.

Shortly after the Technology Evaluation Report was promulgated to all regulatory agencies within the U.S. and its territories and to British Columbia on March 1st, 1995. Shortly thereafter, Tom noticed his thriving business began to cease and was unable to get any contracts to install the US Congressionally mandated BADCT technology he developed to meet the mandates required by the Federal Water Pollution Control Act.

It wasn't long before he became aware that the US EPA had boycotted his technology from being allowed within the USA. This didn't make sense to Tom. The technology eliminated all discharges of pollutants, as mandated by law, restored the alkalinity of the water to a healthy/healing pH level of 7.5-8.0, and provided for the 100% recycle and reuse of all water used, thereby eliminating 100% of all “wasting” of water, and which was scalable to any size application. In other words, the AES Technology eliminated all discharge of pollutants at the source as required by federal law. It didn't make any sense to Tom why the US EPA would boycott this new best available technology that the federal law mandated to be installed at every point-source of pollution in America.

Tom was in for a rude awakening! Believing in the American system of jurisprudence, as does virtually everyone, he began to pursue his remedy for his damages due in justice courts [supposedly] of law. Tom filed over 20 complaints of criminal pollutant discharge violations in courts in California and Arizona over a period of several years, 10 in federal and the other in state superior courts, only to have every one of them “dismissed.”

He came to realize the corruption was being kept in check by the so-called judges and magistrates in those so-called courts of the United States. They didn't have any judicial

authority in America under the Bill of Rights. They were commissioned to protect their “employer’s”, the CROWN OF ENGLAND, the UNITED STATES, the STATE OFs, COUNTY OFs, and CITY OFs, all MUNICIPAL CORPORATIONS belonging to the unholy trinity, the VATICAN/ the CROWN / and the UNITED STATES, all of which belonged to the VATICAN, criminal municipal wastewater enterprises. Tom learned that all so-called “government” operating in America are in fact all private “municipal / military” corporations, operating as a monopoly, to monopolize all utilities in America, and are all operating for-profit CORPORATIONS acting to impersonate “government.”

Tom learned that these so-called courts were not real courts of the United States at all; but are in fact administrative agencies of the CROWN OF ENGLAND established to protect their one-half trillion dollar per year industry, the largest industry in the world (that had been unlawful since July 1, 1973), belonging to the VATICAN BANK. These criminal enterprises pose as justice courts, but are nothing more than a criminal enterprise and enemy of the American people charged with the mission to steal [kidnap], kill [murder] and destroy [the life liberty and the pursuit of happiness] the American people. These so-called courts are in fact BAR courts, sewer “drain-courts” of the CROWN OF ENGLAND originating since the 1400s. Tom soon learned the feds, states, counties, municipalities and all their agencies were all operating in collusion with each other as this criminal enterprise and their judges and magistrates were usurping judicial authority which they didn’t have, to stave off any actions that may threaten this criminal enterprise, a secret society doing business as the UNITED STATES WASTEWATER MANAGEMENT INDUSTRY.

In a lawful justice court or also known as a Constitutional court of record, also known as an “Article III court”, the following lawful practices in a court procedure are:

1. The magistrate 1) has no power to judge and 2) provides ministerial duties only
2. The court is the sovereign [plaintiff] and his/her suit
3. There must be probable cause established to determine jurisdiction by plaintiff
4. There shall be a trial by jury, the jury consisting of 25 peers of the plaintiff.
5. Not even the United States Supreme Court can question the judgment of the sovereign’s Constitutional Court of Record. No agencies have standing against it.

In a criminal non-Constitutional non-court of record, which is every district, state and municipal court, the following criminal practices are:

1. The magistrate calls himself/herself a “Judge” and “unlawfully” usurps power, not available to him by the legislature, and makes rulings and orders that ruin people’s lives. He is a traitor to his Oath and terrorist to the American people.
2. The court is the Judge’s court. He steals the court from the people.
3. Determining probable cause to determine jurisdiction is not a concern of the judge. The charge is sufficient to suggest one’s guilt.
4. The court will not recognize the superior jurisdiction of the sovereign American people.
5. The court does not determine cause prior to proceeding to a jury trial, not the people’s rightfully required Constitutional “trial by jury.”
6. The court does not provide a trial by jury, but a non-Constitutional jury trial not of peers of the accused, but of paid peers who have subjected themselves (generally unknowingly) to the criminal enterprise via their “Voter’s Registrations.”

7. The state judge also receives pay [bribes] from the county and the prosecutor, and receives bonuses that are paid to him/her in his/her retirement benefits.

As a member himself of the UNITED STATES WASTEWATER MANAGEMENT INDUSTRY since 1972, Tom knew that the mandate of Congress for clean water was not only federal law, but was the right of the people. As he further investigated, it became very clear the so-called United States Wastewater Industry was in fact the US EPA operating in collusion with all States and their regulatory political subdivisions, county and municipal public works. It became clear there was no intent on their part to do what was right and lawful, such as eliminating toxic pollutants that are poisoning the American's drinking water supplies. Tom soon proved that they were only going to do what created a revenue stream or streams for their own avarice economic benefits. It became clear the US EPA and stakeholders were operating as a criminal enterprise, NOT in the best interest of the American people.

On July 11th, 2013, the SUPREME PONTIFF FRANCIS in his Apostolic Letter confirmed the UNITED STATES, its STATE OFs, COUNTY OFs, CITY OFs and every one of their POLITICAL SUBDIVISIONS, collectively members of the Roman Curia, are operating as a CRIMINAL ENTERPRISE. In his Apostolic Letter of August 8th, 2013, he confirmed their money laundering and their operating of chemical and biological weapons of mass destruction (public sewers) to generate unjust enrichments. Use of public sewers has been declared "unlawful" since 1985. The very first goal and policy defined by US Congress was in Pub. L. 92-500 Federal Water Pollution Control Act Amendment of 1972 was to eliminate the use of public sewers (publicly owned treatment works) by 1985 so as to eliminate the unlawful discharge of pollutants into navigable waters.

However, the other primary industries of the secret society that realized unjust enrichments from the discharge of pollutants into our nations drinking waters were 1) the UNITED STATES insurance companies; 2) the UNITED STATES pharmaceutical companies; and 3) the UNITED STATES healthcare companies. Further, annual MUNICIPAL income from these unlawful public sewers mandated to be eliminated by 1985, starting on July 1, 1973, represented over 40% of MUNICIPAL revenue annually. The criminal enterprise, impersonating the United States Government, but not, couldn't allow this to happen, couldn't allow this new environmental law to be adopted and enforced. There was too much money at stake to consider public health and welfare.

To avoid US compliance with this United States congressional mandate from being implemented, Tom learned President Nixon (the CEO of the UNITED STATES WASTEWATER MANAGEMENT INDUSTRY), in 1973, put the American BAR Association in control of all courts of the United States and removed all Rules of Evidence and Rules of Civil and Criminal Procedures for all courts of the United States and Magistrates. (Pub. L. 93-12)

Further, Nixon (a BAR member) and the criminal enterprise consisting of BAR attorneys, civil engineers and banks, operating and making up the secret society known as the UNITED STATES WASTEWATER MANAGEMENT INDUSTRY, made it a policy that no courts of the United States or magistrates would recognize Pub. L. 92-500 Federal Water Pollution Control Act Amendment of 1972 in any of these courts of the United States. Further, Tom learned the US Congress became unlawfully convened on March 5th, 1813, when it was occupied by the CROWN's "Title of Nobility" International BAR

members, who refused to surrender their seats following the final ratification of Article XIII of the Bill of Rights Amendment of the United States Constitution, receiving final ratification by the final state of New Hampshire necessary on December 9th, 2012. Upon the non-title of nobility members allowing the titles of nobility members to keep their seats unlawfully, constituted aiding and abetting the enemy, a criminal enterprise, to take control (implement marshal law) of the United States government on March 5th, 1813. America has been under the control of a foreign MUNICIPAL CORPORATION ever since. Tom discovered that the entire UNITED STATES GOVERNMENT consists of a bunch of “sewer rats” spreading disease via American’s drinking water supplies.

Accordingly, Tom realized that, before his AES Technology could be applied to clean up America’s (global) waters and provide clean pure water to the people of the world, these UNITED STATES government imposters had to be first cleaned up.

The obvious need was for a method by which the American people can *demand fairness* from their public servants and get it, or, have a way to *receive damages* if their public servants fail to properly serve them. So many people say what we need is “enforcement.” To enable that need, in 2008 Tom and a couple of his associates organized the National Standards Enforcement Agency, now NSEA International.

In early 2013, NSEA International organized the International Environmental Court, the supreme court of the people as was provided for by the US Congress in 1972 under Sec. 7 and Sec. 9 of Public Law 92-500 Federal Water Pollution Control Act Amendment of 1972 (“Federal Water Pollution Control Act”). The International Environmental Court is “the court of the living,” as opposed to the current inferior BAR COURTS that are “courts of the dead.”

The officers of the International Environmental Court are American nationals and state commissioned officers doing business as Notary Publics (Grand Jurors) and state commissioned Bail Bond Agents (Environmental Marshals to carry out the Orders of the Environmental Court) in the American nation-states. The International Environmental Court is a separate court and court system from the currently known BAR COURTS of the criminal enterprise of the Roman Curia, foreign inferior “military/maritime” courts having officers that have allegiance to a power foreign to that of the civilian population of America and its nation-state sovereignty. They are all acting environmental terrorists.

The Federal Water Pollution Control Act is a “strict liability statute,” meaning there is no excuse for non-compliance. If a person is operating in violation of this federal public health law established to secure clean water for all nations of America, they are subject to the statutorily defined punishment for committing criminal acts in violation of that law defined in the ENFORCEMENT section 309 of the Federal Water Pollution Control Act.

The International Environmental Court has no restriction of jurisdictional boundaries (transnational) which enables an environmental claim to be filed against an “environmental terrorist” who might be located in any other international jurisdiction, from any other jurisdiction internationally. Environmental law is a single-jurisdiction law. Upon perfection of the claim (failure for the person to confirm compliance within a reasonable period of time), civil penalties are imposed, a bond on the judgment is issued and recorded with the United States Treasury. Upon failure to settle a claim, the person is convicted for civil violations, criminal penalties are imposed and an Arrest Bond is issued to enable a state commissioned Bail Bond Agent to facilitate the arrest of the convicted

environmental terrorist(s), and to deposit said environmental terrorist(s) to the nearest federal penitentiary to serve out the statutorily defined punishment for operating in violation of the criminally defined federal public health laws.

On December 15th, 2013, Tom and several other American nationals established IN GOD WE TRUST, a trust established to provide funding to beneficiaries to initiate the “America’s Reconstruction Project, American Nationals for Clean Water, Clean Food, Clean Air and Clean Government.” See www.nsea.us/in-god-we-trust-2/

 **America’s** 
Reconstruction Project
American Nationals
for Clean Water, Clean Food,
Clean Air and Clean Government

Currently, the Environmental Court, as a result of perfected claims against the COUNTY OF SANTA BARBARA and COUNTY OF SAN LUIS OBISPO of the STATE OF CALIFORNIA, has ORDERED a \$1,000,000.00 American National Security Bond be issued to every citizen who resides in each of these counties as a remedy for harm caused them by these municipal corporations’ toxic discharges of hazardous wastes into the public’s drinking water supplies, unlawfully now for over 40 years. These bonds are secured by a master bond filed with the Department of the United States Treasury.

Today, Tom is the world’s foremost expert in the leading extended aeration activated sludge biological process technology for purifying domestic, commercial and industrial wastewater [polluted] flows [sewage], to a non-polluting, healthy/healing and potable clean water quality. His technology is scalable from a single domestic household to the largest municipal or industrial application requirement. He has written and published the National Clean Water Standards of Performance and also the Clean Water Regulations which is available on the NSEA International website www.nsea.us for view.
